Revenue Model

What is Cyberpunk City?

Cyberpunk City is a blockchain-based Metaverse. Built on Unreal Engine 5 and powered by MultiversX. Cyberpunk City offers an immersive and unique gaming experience with various activities, such as battle royale, team deathmatch, and sci-fi car racing games.

Cyberpunk City provides users with excellent security through its WalletConnect login system, which is done through xPortal by scanning a QR code. It also delivers a unified platform for all its users, enabling them to access their social media, DeFi, GameFi, and NFT Marketplace accounts from within the metaverse without the need to log in to them separately.

Cyberpunk City's atmosphere is ideal for socializing and holding events, making it the perfect place to be joined by the whole community. You can experience the metaverse's first glimpse through Alpha, launched on June 6, 2023.

WHITEPAPER ↗

How to start with Cyberpunk City?

Acquire a CitizenNFT: Players must obtain a CitizenNFT as a first step. Citizens can be minted directly from our dApp using $CYBER tokens or purchased from the secondary market.

Download the game: After having a CitizenNFT, players head to our website and download the Cyberpunk City game. It's essential to have the game installed on the device to access the metaverse.

Access the metaverse with xPortal: Within the xPortal app, choosing a QR code scanner and scanning the code in the game will enable the users to access the world of Cyberpunk City.
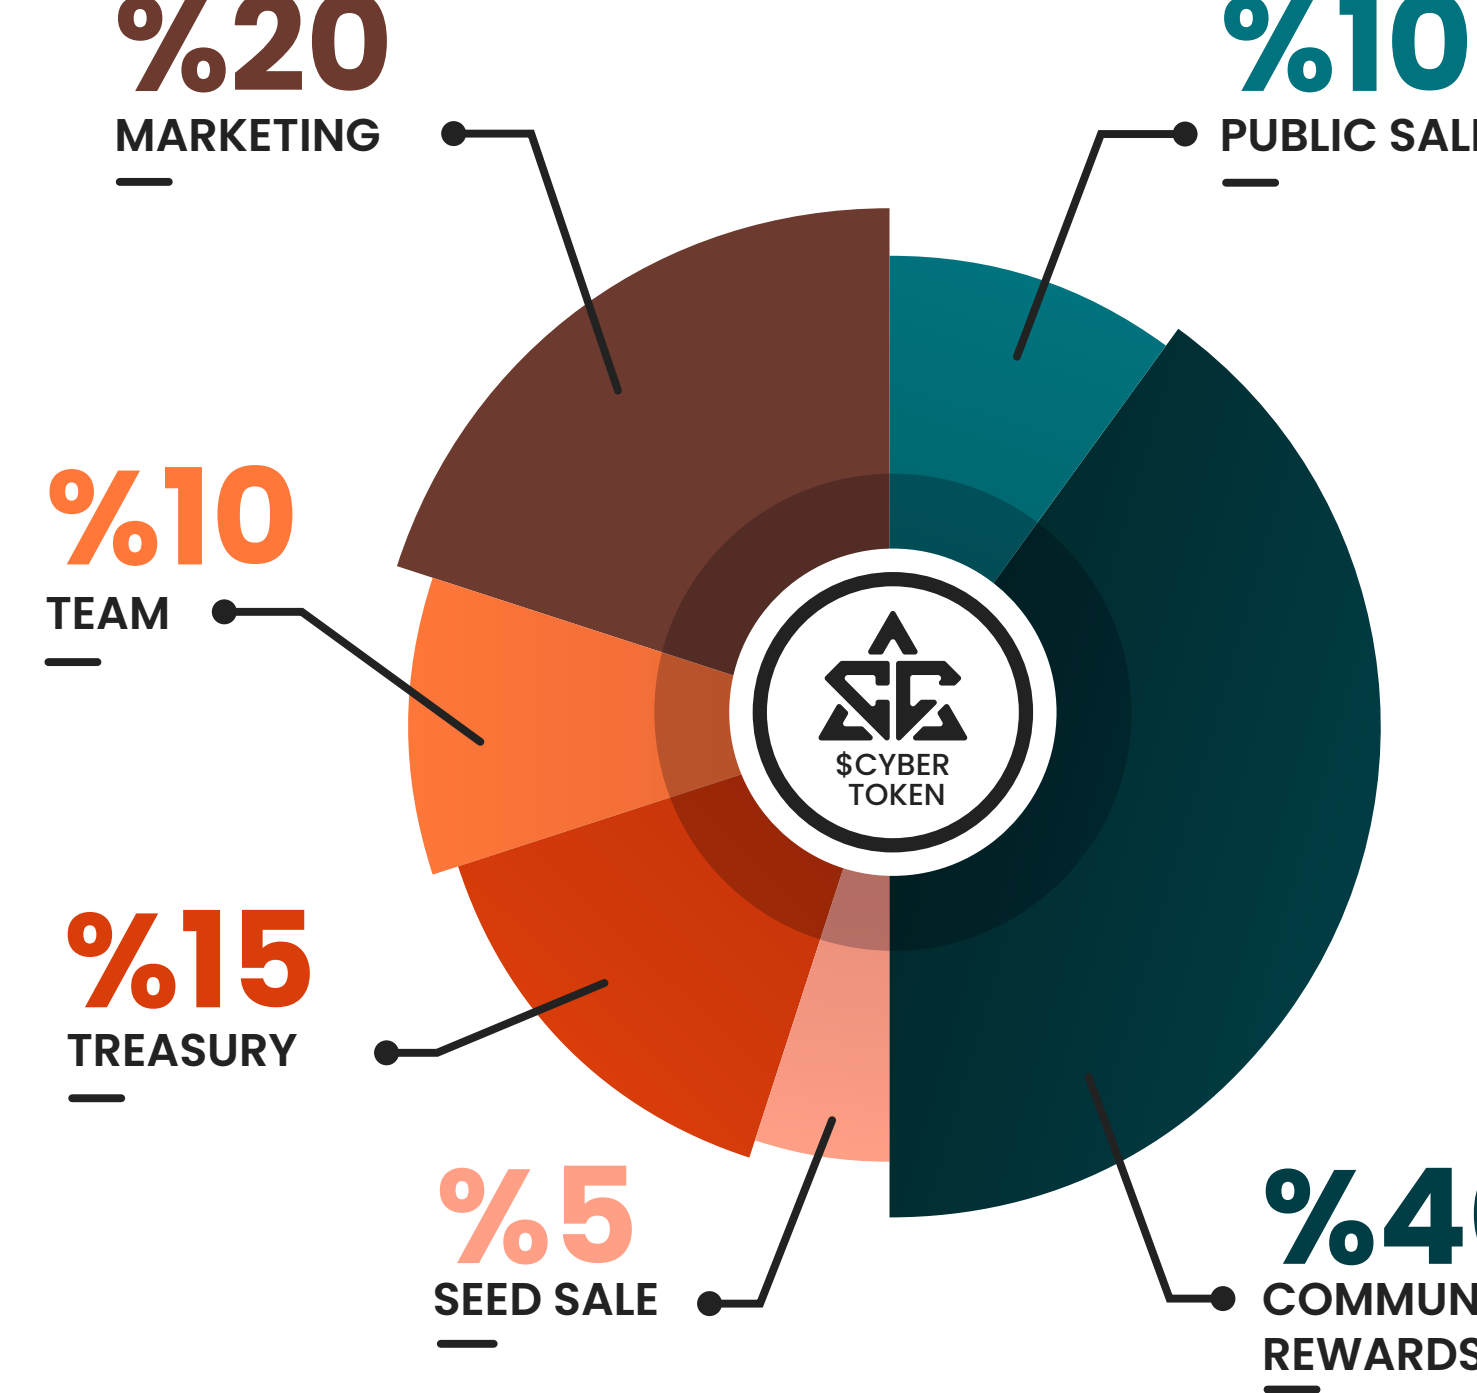

In game activities: In Cyberpunk City, players have the freedom to engage in various activities. Buy, sell, and transfer assets, which may include properties, items, or collectibles.

Beyond gaming use cases: Cyberpunk City also offers exciting use cases beyond gaming. For non-gamers, there are opportunities to explore, invest, and participate in the metaverse's thriving economy. Discover unique roles and experiences suited to your interests and goals (more on that later).

CyberpunkCity (CYBER)
Token Overview

Token Identifier:	CYBER-480c1c ↗
TGE:	June 22nd, 2022
Initial Supply:	100M $CYBER
Current Supply:	94,279,825 $CYBER
Circulating:	24,279,611 $CYBER
Token Price:	0.0025 EGLD
Market Cap:	$2M USD
Public Sale Allocation:	10M $CYBER
Sold Amount:	8,580,888 = 9,447 EGLD (522,00 USD)
Unsold (Burned):	1,419,112

What makes Cyberpunk City unique?

Cyberpunk City sets itself apart through a combination of unique features and cutting-edge technology. It offers a groundbreaking gaming experience in the Metaverse with a strong emphasis on tokenomics and real ownership. The game's foundation lies in well-designed tokenomics, ensuring utility and value for the in-game token.
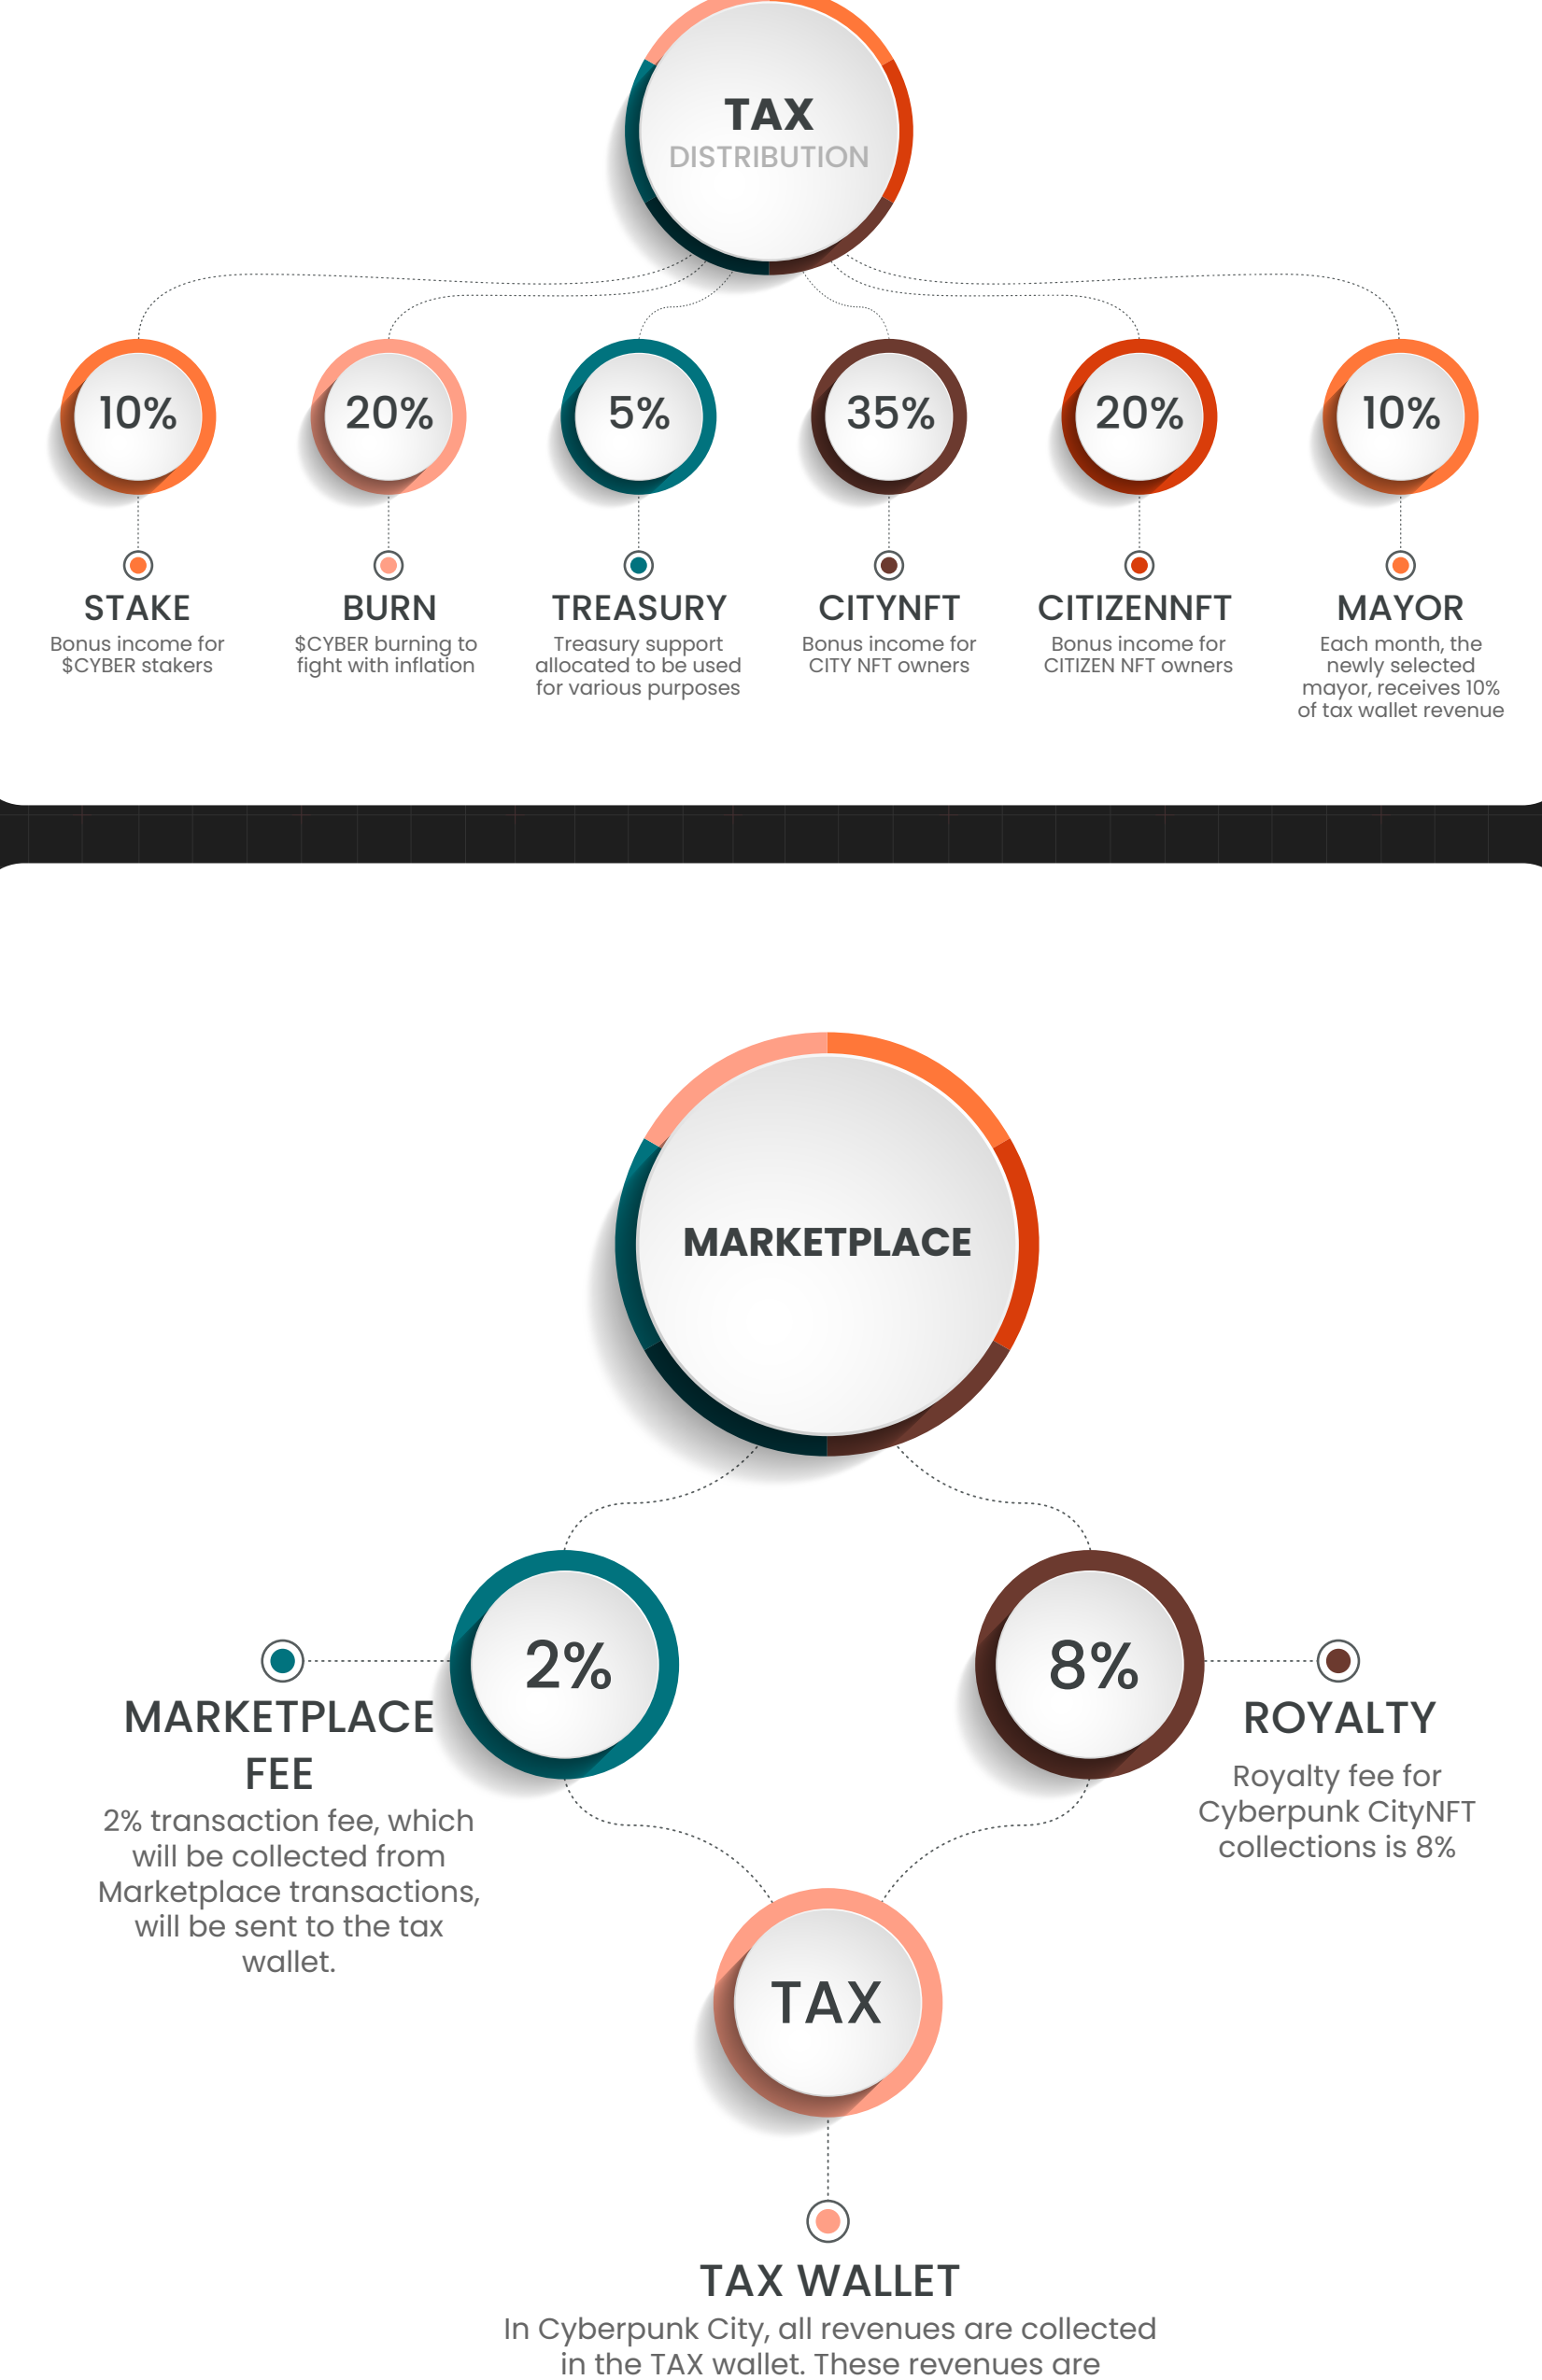

By operating on MultiversX, players enjoy true ownership of their assets, enhancing their gaming experience and investment potential. The innovative concept of the **Mayor** adds a distinct layer of gameplay, while the renting mechanism and Play-to-Earn (P2E) opportunities further enrich the virtual world.

One of Cyberpunk City's standout elements is its exceptional graphics, powered by Unreal Engine 5 (UE5). This results in stunning visuals that immerse players in a high-quality blockchain-based gaming project.

The game offers three captivating modes: Battle Royale, Deathmatch, and Car Racing, catering to a broad range of players and attracting traditional gamers into the world of Web3.

Security and ease of use are top priorities in Cyberpunk City. Utilizing **xPortal**, players can securely store their funds and log into the metaverse through a convenient QR code scanning process. Additionally, the integration **WalletConnect** into UE5 facilitates seamless blockchain connectivity, ensuring a smooth and hassle-free experience within the Metaverse.

In summary, Cyberpunk City stands out by combining groundbreaking tokenomics, real asset ownership, innovative gameplay features, top-notch graphics, and a strong focus on security and usability. These elements make it a standout project in the ever-evolving landscape of blockchain-based gaming and the Metaverse.

- ROYALTY 8%
- TAX

TAX WALLET
In Cyberpunk City, all revenues are collected in the Tax wallet. These revenues are distributed as indicated in the chart below.

What are the titles of Cyberpunk City's community?

The community is at the core of Cyberpunk City's heart and is classified into three categories.

CITIZENS
To become a Cyberpunk City citizen, users must own a character from CitizenNFT Collection (10,000 characters). With the character in possession, they can access the game, generate income even when they're not playing (20% of tax distribution), and become a part of the DAO.
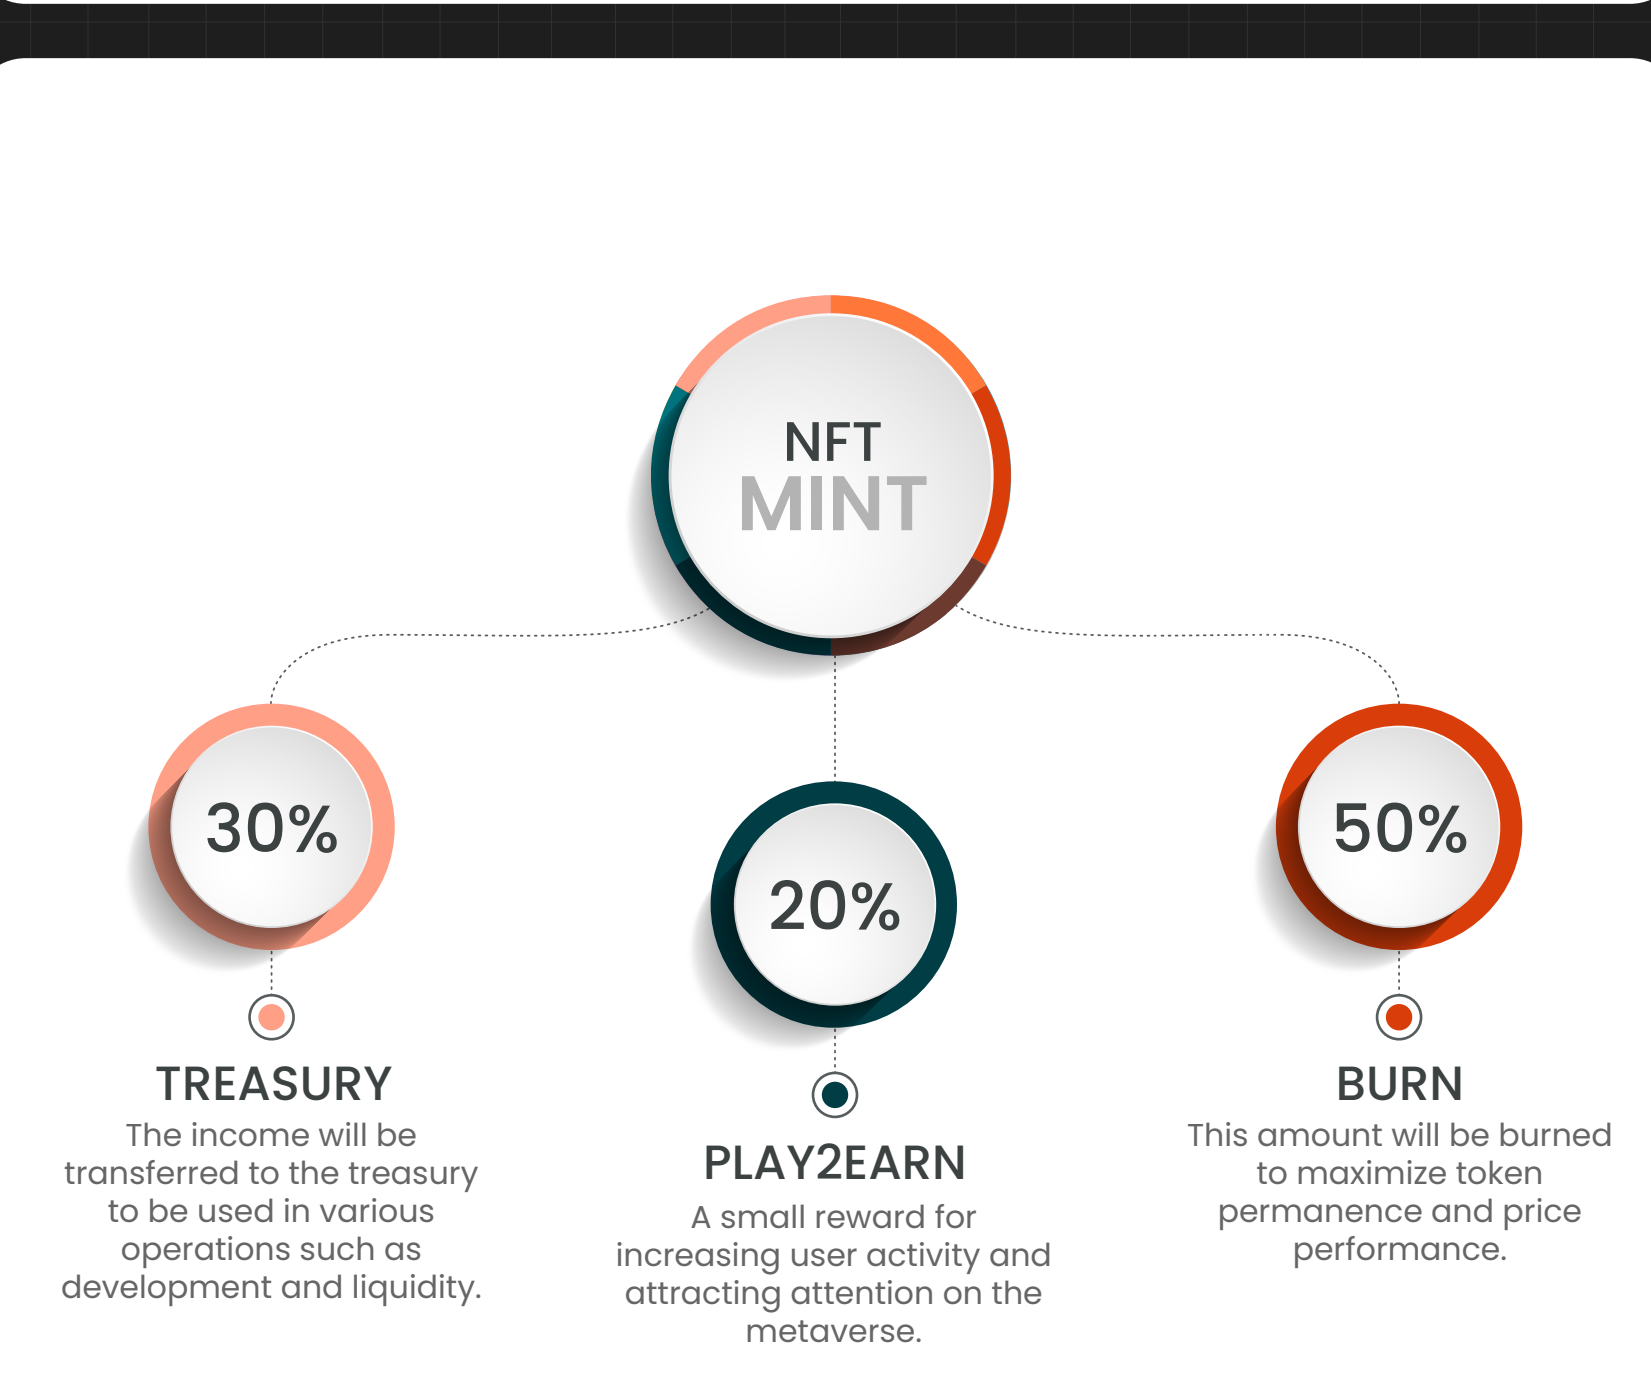

MANAGERS
Managers are the property owners in Cyberpunk City. Just like citizens, they are also required to possess a character to be able to log into the game. Their income rates are higher than those of regular citizens (35% of tax distribution). However, they can't put their NFTs up for rent. They can only exchange them.
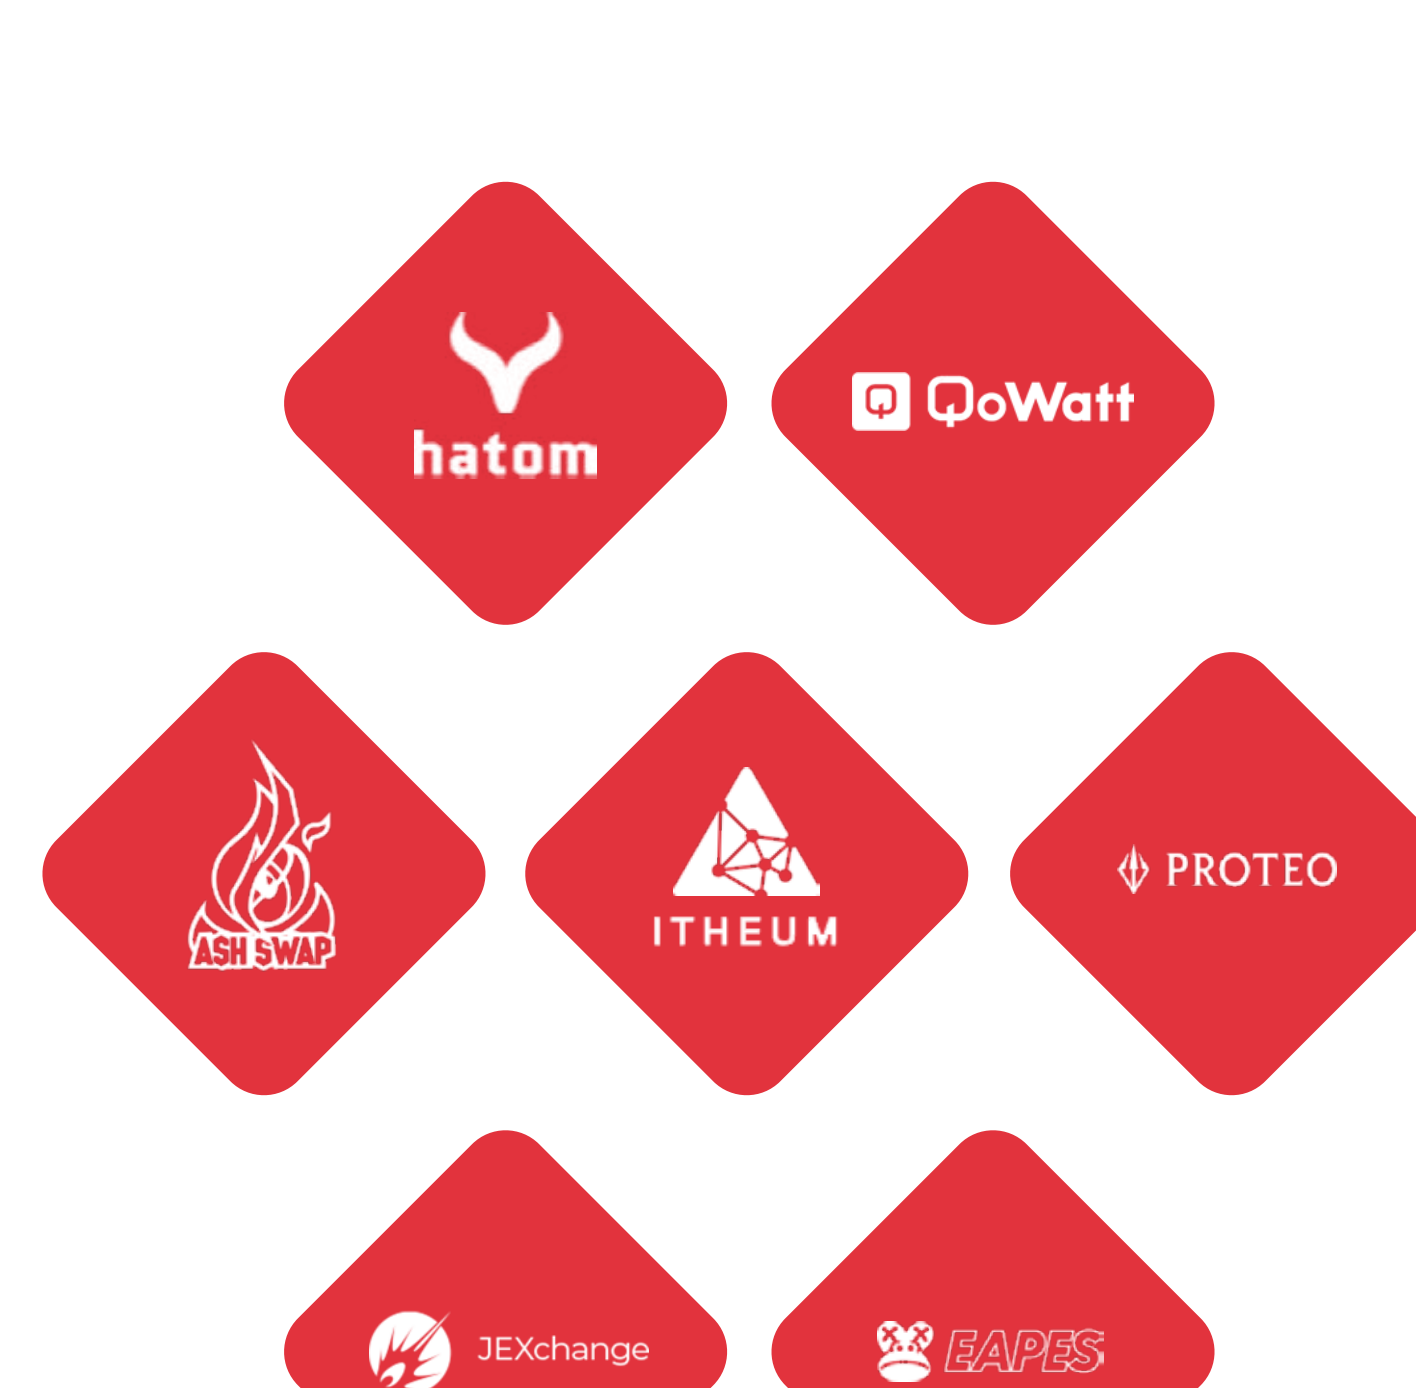

INVESTORS
Investors are CYBER token holders or, in other words, income generators. By staking their tokens, they generate income from staking rewards and taxes (suitable for non-NFT users.)

That being said, the chart at the top shows how the revenue stream works. And we can notice here that community get 75 of the revenue of the tax wallet. This shows how much we value our community.

PARTNERS

What are some of your key achievements?

WalletConnect: We are the first to integrate WalletConnect v2.0 with Unreal Engine 5. It communicates with the blockchain, performs the sign-in, and sends TX functions. We also made it open source on **GitHub.**

Talented and diverse team: We have assembled a team of 16 highly skilled and talented individuals. Thirteen of the team members work full-time from our office, fostering effective collaboration, while the remaining three work remotely.

The alpha: We launched Cyberpunk City's highly anticipated alpha version on June 6, 2023. This initial release marks a significant milestone in our journey toward building an immersive and captivating metaverse experience. While we are excited about the alpha version, it is just the beginning of what promises to be an even more remarkable beta phase.

TEAM

Çağrı Özcelik · K. İhsan Can · Eyüp İlhan · Yakın Vaya

Which future steps are on the horizon?

Cyberpunk City Virtual Event
We are working on the biggest virtual event under the MultiversX network! This event will bring all people from the ecosystem to participate and will start one month from now.

This event will include The Maze, AMA with a well-known figure, and more sub-events.

Team & Office Expansion
As we elevate our metaverse experience, we are expanding our team with top-notch game developers, 3D artists, marketing/ graphic designers, and moderators. Quality remains our priority to enhance the virtual adventures.

We are also planning to expand our office space in anticipation of accommodating a growing number of team members.

xDay 2023
The xDay 2022 was phenomenal, but xDay 2023 is expected to be even better. Last year some of the community members tested our game, but now it's on another level, so it's time to have a booth.

Beta Release
The beta release is one of the biggest steps and a momentous milestone for Cyberpunk City, representing a critical stage where the game's true potential and essence come to light. Players will finally experience the game in its evolving form. This stage is for gathering feedback and identifying areas for improvement while already having all the game's core elements.

Cross-Chain
One of our future plans is to go cross-chain, which is a great idea to bring more users to MultiversX and have more users in our metaverse.
